

PROFESSIONAL SUMMARY

Final-year AI & Data Science undergraduate with hands-on experience building production-grade ETL pipelines, RAG-based AI systems, and data engineering workflows at Eli Lilly. Skilled in Python, SQL, and Databricks, with exposure to LLM integration, vector search, and generative AI architectures. AWS Generative AI Ideathon finalist. Eager to contribute to next-generation AI engineering teams working on agentic systems and large-scale data platforms.

INTERNSHIP EXPERIENCE

Data Engineering Intern

Jan 2026 – Jul 2026

Eli Lilly and Company | Onsite

- Designed and implemented production ETL pipelines following Medallion Architecture (Bronze, Silver, Gold), enabling structured data flow from raw ingestion to analytics-ready gold layer on Databricks.
- Applied Python (Pandas, NumPy) and SQL-based transformation logic to clean, validate, and preprocess large enterprise datasets, improving downstream data quality and reporting accuracy.
- Built analytics workflows aggregating structured datasets and delivering business insights aligned with organizational KPIs, directly supporting data-driven decision-making for cross-functional teams.
- Collaborated with engineering and business stakeholders to translate requirements into scalable solutions, gaining hands-on SDLC, requirements analysis, and agile delivery experience.
- Worked with Databricks Lakehouse Platform, Delta Lake, and Apache Spark for distributed data processing — directly applicable to LLMOps and ML pipeline infrastructure.

PROJECTS

RAG-Based Local AI System (VectorDB Engine)

2026

Personal Project

- Built a full-stack Retrieval-Augmented Generation system using a C++ vector database backend (HNSW, KD-Tree, BruteForce) integrated with Ollama-hosted LLMs (Llama3.2, nomic-embed-text) for local document Q&A.
- Implemented semantic search pipeline: text chunking (250-word overlapping windows) → 768-dimensional vector embeddings → HNSW approximate nearest neighbor retrieval → prompt-augmented LLM generation.
- Designed REST API backend with endpoints for document ingestion, vector search, RAG querying, and algorithm benchmarking — connected to a JavaScript frontend via HTTP fetch calls.
- Demonstrated end-to-end understanding of vector databases, embedding models, context retrieval, and grounded generation — core components of production RAG systems used in enterprise AI.

Spring Boot CRUD REST API with MySQL

2024

GeeksforGeeks Bootcamp

- Architected a production-style REST API with full CRUD operations using Spring Boot, MySQL, and JPA, implementing a layered Controller-Service-Repository pattern for maintainability and scalability.
- Validated all API endpoints using Postman ensuring robust data flow, consistent error handling, and API reliability — practicing test-driven development principles.

Food Delivery System

2024

Academic Mini Project

- Developed a fully functional food delivery application with order lifecycle management and user workflows, demonstrating end-to-end software delivery from requirements to deployment.

TECHNICAL SKILLS

AI & GenAI	RAG Pipelines, Vector Databases (HNSW), LLM Integration (Ollama, Amazon Bedrock), Prompt Engineering, Semantic Search, Embedding Models
Data Engineering	ETL Pipelines, Medallion Architecture, Delta Lake, Apache Spark, Databricks Lakehouse, Data Validation, Data Warehousing
Programming	Python (Pandas, NumPy) — Intermediate, SQL — Intermediate, Java — Beginner, C — Intermediate, JavaScript — Beginner
Frameworks & Tools	Spring Boot, REST APIs, Postman, Git, Power BI, Tableau, Microsoft Excel
Cloud & Platforms	AWS (Amazon Bedrock, PartyRock), Databricks, Cloud Data Platform Exposure
Core CS	Data Structures, OOP, SDLC, Database Design, API Development, Software Engineering Principles

EDUCATION

B.E. — Artificial Intelligence & Data Science

GSSS Institute of Engineering and Technology for Women, Mysuru | CGPA: 8.66 | 2022 – 2026

Pre-University (Intermediate)

Vijaya Vittala Composite PU College, Mysuru | 85.8% | 2022

SSLC

Chaitra High School and PU College, Mysuru | 92.8% | 2020

CERTIFICATIONS & TRAINING

- Databricks Fundamentals** — Databricks Academy (2026): Delta Lake, Apache Spark, Lakehouse Platform, data engineering workflows.
- Java Programming** — Great Learning (Apr–May 2024): OOP principles, backend application development.
- Web Development** — Infosys Springboard (Jun–Jul 2024): Responsive design, JavaScript frameworks, dynamic web application development.

ACHIEVEMENTS

- AWS Generative AI Ideathon Finalist (Jan 2025):** Developed an AI-powered solution using Amazon Bedrock and PartyRock, competing at national level among student innovators — demonstrating applied GenAI skills under real-world constraints.

LANGUAGES

English — Full Professional Proficiency | **Kannada** — Full Professional Proficiency | **Hindi** — Professional Working Proficiency
